Job summary

Experienced Data/Business Intelligence developer required to play a key role in helping to transform how data is used at an enterprise level, using the latest cloud based tools and methodologies.

You will have experience working with modern Data & BI tools in a customer focused setting and a strong awareness of emerging trends within this field. You will also be working in an agile/SCRUM methodology. You will be ambitious, adaptable and a team player with great communication skills.

In return you will work in a modern, flexible environment. You will work with the latest, cloud centric, tools and methodologies, in an agile/dev ops team where you will gain the skills and experience to take your career to the next level.

Key Tasks & Responsibilities

1. Design, Develop and Deliver the key data structures required to meet the analytical needs of all functions of a company as it transforms itself around data and technology.
2. Develop excellent relationships with colleagues whose success is dependent upon your work, including reporting analysts, data engineers & data scientists.
3. Guide and mentor teammates. Help build a high performance, self-supporting team.
4. Proactively investigate and advocate for new tools, processes and working methodologies.
5. Continuous review and implementation of best of breed practices to manage data quality within the organization.
6. Build relationships, both on-site and internationally, to ensure we take fullest advantage of existing global expertise and to ensure that our talents benefit international colleagues.
7. Deploy complex data models, analytics programs and machine learning & statistical methods
8. Prepare data for easier consumption by business and for predictive & prescriptive modelling
9. Support infrastructure deployment effort with AWS
10. Be adequately informed on product and services delivery progress as it relates to application delivery.

Qualifications

- Third level degree (in Computer Science or related field).
- Experienced in effectively interacting and communicating with IT & Business partners
- Advanced server platform administration expertise, and demonstrated knowledge in performing compliance and security audits and validating disaster recovery capabilities
- Demonstrate knowledge of load balancers VIPs, architecting fault tolerant systems, and firewalls.
- Must have several years of cloud experience in AWS, Google Cloud, etc. as a data engineer
- Can consolidate requirements and translate them into IT & Business deliverables
- Understands ETL/Integration tools and data integration architectures including ETL/Integration in complex technology environments
- Experienced configuring ETL/Integration solutions within the Software Development Life Cycle (SDLC) processes
- Knowledge of Performance Management methodologies used to drive ETL/Integration solutions
- Good facilitation skills and the ability to work effectively with peer and leadership teams

Liberty Seguros is an Equal Opportunity Employer
